

Gallatin National Forest

FOREST PLAN

MONITORING REPORT

2005-2007

INTRODUCTION

The Land and Resource Management Plan for the Gallatin National Forest was approved by the Regional Forester in September 1987. This Plan established direction for management of the Forest for a ten to fifteen year period. The regulations governing forest planning include requirements that monitoring and evaluation be conducted during Forest Plan implementation. This document is an aggregate of monitoring for fiscal years 2003 through 2006 on the Gallatin National Forest. The report addresses the monitoring requirements of the Forest Plan, Table IV-1, pages IV-5 and IV-6.

MONITORING ITEMS

Forest Outputs

Best Management Practices

Management Area Standards

Stream Channel Stability

Grizzly Bear Mortality

Effectiveness Monitoring for Sediment

Soil Stability

Water Yield

Restocking Harvest Areas

Suitable Timber Base

Harvest Size Limit

Insects and Disease

Management Indicator Species
